

XY IMAGER i

the intelligent turntables

360° photography and more

The new XY IMAGER „i“ devices are the perfect solution for entry level users and small businesses which only want to produce 360° pictures. Nevertheless you can integrate these turntables into the XY IMAGER system problemfree.

Compared to the standard devices, XY IMAGER „i“ turntables have their own intelligence. For control you can either directly connect the XY DISPLAY ONLY (optional available), or operate via PC (MAC, Windows), using external software like Object2VR by Gardengnome Software. Therefore you need the optional available XY USB ADAPTER. The camera is operated directly via remote control pin.

For producing 3D pictures with the robotic arm XY BOOM and for using the 50 i device as top unit in synchronised operation the big control XY CONTROL is necessary.

XY SPIN TOP 50 i

Supports weights of up to 50 kg at its center.

XY SPIN 300 i

Supports weights of up to 300 kg at its center.

OPTIONAL ACCESSORIES

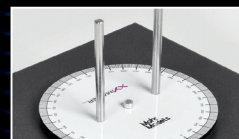

XY DISPLAY ONLY
